

Hanzla Sibghat

Full-Stack Engineer | Enterprise SaaS | AI & RAG Integration

+49-170-9098399 — hanzlasib24@gmail.com — linkedin.com/in/hanzlasibghat — github.com/hanzla-sib — Portfolio — Munich, Germany

Summary

Full-stack engineer with 3+ years of professional experience delivering production web applications, enterprise platforms, and government-scale systems end-to-end. Comfortable owning the full product lifecycle independently: system architecture, REST and GraphQL API design, database engineering, responsive frontends, CI/CD pipelines, and containerized deployments in live environments. Experienced in building AI-powered features including retrieval-augmented generation (RAG) pipelines, semantic search, vector embeddings, and LLM integrations (GPT-4, Mistral, Ollama).

Skills

Languages:	TypeScript, JavaScript, Java, Python, SQL, C++
Frameworks/Libraries:	React, Next.js, Node.js, Express.js, Spring Boot, Tailwind CSS, Material-UI, Redux
Databases:	PostgreSQL, MongoDB, MySQL, Redis, Oracle, Firebase
DevOps and Infrastructure:	Docker, AWS, GitHub Actions, CI/CD, Vercel, REST APIs, GraphQL, Linux
AI and Machine Learning:	RAG Architecture, LangChain, Vector Embeddings, Semantic Search, OpenAI API, Ollama
Testing and Tools:	Jest, React Testing Library, Playwright, Cypress, JUnit, Mockito, Git, Postman

Experience

Siemens AG

Software Engineer (Working Student)

Feb 2025 – Present

Munich, Germany

- Contributed as a full-stack engineer on an internal enterprise product, taking end-to-end ownership from API design and async processing to React/TypeScript UI delivery for thousands of Siemens users.
- Built RAG pipelines and document ingestion flows integrating LangChain, Ollama, GPT-4, and Mistral with vector embeddings and OCR/VLM-based PDF processing.
- Architected REST APIs and async job pipelines on the backend while implementing rich frontend interfaces with Redux, owning features from database schema to production UI.
- Containerized services with Docker and CI/CD via GitHub Actions, reducing deployment time from 30 minutes to under 5; achieved 80%+ test coverage with Jest.

Enterprise AI Document Assistant - Chrome Extension (React, TypeScript, Node.js, Redux, LangChain, RAG, Docker)

- Architected a full-stack enterprise Chrome extension delivering AI-powered search, chat, and document analysis with reusable, type-safe component libraries.
- Designed REST APIs and async job pipelines for document chunking, embedding generation, and semantic retrieval across large internal document corpora.
- Implemented streaming LLM responses, optimistic UI updates, and real-time interactions for enterprise document workflows at scale.

National Database and Registration Authority (NADRA)

Software Engineer

Feb 2024 – Sept 2024

Islamabad, Pakistan

- Delivered end-to-end full-stack applications for national identity services, supporting high-volume citizen workflows on IoT kiosks deployed nationwide.
- Designed RESTful APIs handling 10K+ requests per minute with connection pooling, caching, and async processing for mission-critical government infrastructure.
- Optimized database performance through indexing, query rewriting, and caching, reducing average query latency by 70%.
- Wrote unit and integration tests across the stack using JUnit, Mockito, and Jest, strengthening code quality and release confidence.

One App - National ID Services (Java, Spring Boot, Next.js, Redux, Material-UI, PostgreSQL)

- Built citizen-facing CNIC application and renewal flows with multi-step validation, Family Registration Certificate (FRC) checks, and real-time form feedback.
- Streamlined government service delivery, reducing ID application processing time by 40% and improving application success rate by 30%.
- Implemented secure TLS communication and signed payloads between frontend, backend, and validation services for tamper-proof data transmission.

Kiosk-NADRA - IoT Identity Workflows (React, Next.js, Java, Spring Boot, IoT Integration)

- Integrated IoT biometric devices (fingerprint and iris capture) with kiosk UI and backend verification services for in-center identity renewals.
- Automated validation and payment gateway flows, reducing processing times by 50% and queue lengths by 30% at NADRA centers nationwide.
- Delivered accessible kiosk interfaces for diverse user demographics, improving operational efficiency at service centers by 45%.

PLC Group
Software Engineer

July 2023 – Feb 2024
Ontario, Canada (Remote)

- Developed end-to-end features within an agile team building telecom and data center monitoring platforms, contributing across frontend, backend, and release cycles.
- Supported 100K+ concurrent users with 100% zero-downtime deployments via blue-green strategies and rigorous pre-release testing.
- Participated in sprint planning, code reviews, and cross-functional discussions, translating product requirements into production-ready features.
- Improved application reliability through database query optimization, Redis caching strategies, and load testing.

Edge Point - AXIN Platform (React, TypeScript, Node.js, GraphQL, Redis, Apollo)

- Built responsive dashboards for remote hardware site management across Philippines telecom infrastructure, reducing on-site visits and operational costs by 30%.
- Designed efficient GraphQL schemas with DataLoader-based batching to eliminate N+1 queries, improving API response times by 60%.
- Architected Redis caching layers and implemented React Query and Redux Toolkit for predictable, performant data flows across complex UI hierarchies.
- Delivered uptime/downtime histograms and real-time performance visualizations, improving customer decision-making speed by 50%.

Education

University of Passau, Germany
M.Sc. in Computer Science

Oct 2024 – Present

FAST National University of Computer and Emerging Sciences
B.Sc. in Software Engineering

Aug 2019 – Jun 2023

Languages

English (C1), German (A2 – Currently advancing to B1), Urdu (Native)
